

Staff Training

Safe Time & Money with Training from the Professionals

We are passionate about delivering excellent training. Our training is focussed on achieving the goals and outcomes of our clients and delegates.

We offer a comprehensive and growing range of courses, available as generic off the shelf or customised to your operations, aircraft, logos and colour schemes to give a consistent look and feel.

Why Online eLearning

In the days of ever tightening budgets we are all trying to maximise our training budget. Many of the costs of training are not the actual training but the travel, accommodation and per diem, as well as the investment in training rooms and equipment. With eLearning the vast majority of your training budget can go into training. eLearning allows the students to concentrate on the training and focus on the information they need. Many studies have shown that eLearning can save up to 40% in time alone. eLearning has a number of advantages, these include;

- Training - Anywhere, Anytime.
- Substantial savings due to elimination of travel and expenses.
- Just In Time (JIT) training.
- Quick reaction to new training requirements.
- Higher retention.
- Online training is less intimidating than Instructor Led courses.

Why Instructor Led Training

Some subjects are not suitable to be presented remotely by eLearning, they need to be given face to face. A good example of this is Crew Resource Management. For these courses we can provide Pilot, Cabin Crew, Aviation Security and Dangerous Goods instructors for your training, or alternatively provide courseware to be delivered by your own instructors. All our instructors are qualified and highly experienced in the subject areas that they present.

Although courses are generally written to EU-OPS they can be converted to FAA or other aviation authorities.

Training for:
PILOTS | CABIN CREW | ENGINEERS | GROUND STAFF | AIRPORT STAFF | INSTRUCTORS

AVIATAS

Staff Initial & Recurrent Courses

Security (GSAT)

Looking at the staff members role and procedures for Aviation security.

Initial Course - eLearning or Instructor Led.

Recurrent Course - eLearning.
UK DfT Approved

Incident & Accident Review

Looking at trends of incidents and accidents and the actions being taken to mitigate them.

The course can be generic or customised to your aircraft types and operating area.

Instructional Techniques

This 4 day course is for anyone wishing to become a ground instructor, it covers everything from basic instruction to how to build PowerPoint presentations.

Staff Enrichment Courses

Principles of Flight

Instruction in the Principles of Flight not only is a EU-OPS requirement, it also helps the cabin crew understand the aircraft and how it operates.

Time Zones

Aircraft often travel over time zones, understanding why they occur and what they mean as well as the concept of UTC is important. This course helps in the understanding of this subject.

The 24 Hour Clock

Understanding the 24 hour clock is very important in aviation, this course introduces the 24 hour clock and how to read it, includes interactive examples.

The Phonetic Alphabet

The phonetic alphabet is very important in aviation and this course runs through the alphabet with audio and visual instruction.

Services:

COURSE DEVELOPMENT | TRAINING NEEDS ANALYSIS | LEARNING MANAGEMENT SYSTEMS | TRAINING CONSULTANCY

eLearning

Online training is a cost effective training delivery in a wide range of subjects.

Instructor Led Training

For subjects that are not suitable for eLearning and where face to face instruction is the preferred method.

Blended Delivery

A combination of eLearning & Instructor Led Training, this gives the best of both worlds and may involve pre learning via eLearning and instructor delivered main module.
